PRELIMINARY AMENDMENT

Sir:

Please amend the Application and consider the remarks as hereafter provided:

In the Specification:

Please delete the paragraph beginning on page 1, line 6 and replace with the following so that it reads:

CROSS REFERENCE TO RELATED APPLICATIONS

The present application is a continuation of a parent application serial number 09/705,288, filed November 1, 2000, entitled "A FINANCIAL PLANNING AND COUNSELING SYSTEM PROJECTING USER CASH FLOW", of the assignee of the present invention, incorporated herein by reference.

Furthermore, the present application is a continuation-in-part of U.S. application number 09/431,668 entitled "SYSTEM, METHOD AND ARTICLE OF MANUFACTURE FOR GENERATING A STRATEGIC FINANCIAL MODEL FOR MANAGEMENT AND ADVICE GENERATING PURPOSES" filed November 1, 1999, and the U.S. application number 09/580,273, entitled "SYSTEM, METHOD AND ARTICLE OF MANUFACTURE AND 1P758A-Preliminary Amendment

FOR FORECASTING AND STRESS TESTING USING A NETWORK-BASED PERSONAL INVESTMENT MANAGER” filed May 25, 2000 all of which we are incorporating herein by reference.

Please amend in the specification starting on page 1, line 16, to read as follow:

FIELD OF INVENTION

The present invention relates generally to computerized information systems and more particularly to web-enabled computer implemented financial modeling systems.

BACKGROUND OF THE INVENTION

I.

Financially prudent individuals help develop a financial plans that will aid them in achieving their financial goals. Traditionally, many of these individuals have entrusted their financial plans to personal financial advisors. More recently, however, some individuals have increasingly relied upon computer-based systems that organize their financial assets and liabilities and further provide them with a summary of their financial health. However, these systems tend to focus on the administrative aspects of financial planning without enabling the user to make reasoned choices about their financial futures. Furthermore, these systems are limited by their inability to dynamically analyze the financial goals. These limitations are counterproductive to the user’s needs to develop and manage an integrated personal financial plan from an executive decision-making perspective.

Many existing financial management systems allow users to electronically organize their financial assets and liabilities. These systems typically focus on presenting the user with a transactional summary of their financial health, at a given instance. Furthermore, these systems typically rely on the user to continually update their personal financial data,
